

## 1. Create the database

## 2. Select the database

## 3. Create the Student\_marks table

## 4. Insert records

## 5. Display all records

## 6. Count students

## 7. Find total marks

## 8. Marks greater than 85

The screenshot shows the MySQL Workbench interface with the following SQL queries in the editor:

```
223 SELECT COUNT(*) AS total_students
224 FROM Student_marks;
225
226 SELECT SUM(marks) AS total_marks
227 FROM Student_marks;
228
229 SELECT * FROM Student_marks
230 WHERE marks > 85;
```

The 'Result Grid' displays the results of the third query, showing three rows of data:

| rol_no | name | subject | marks |
|--------|------|---------|-------|
| 1      | Ravi | Math    | 85.50 |
| 2      | Sita | Math    | 92.75 |
| 4      | Phya | Math    | 88.90 |

The 'Output' pane shows the execution log with the following entry:

| #  | Time     | Action                             |
|----|----------|------------------------------------|
| 43 | 20:02:42 | CREATE DATABASE Koumudi_2520090161 |

## 9. Marks greater than or equal to 90

The screenshot shows the MySQL Workbench interface with the following SQL queries in the editor:

```
226 SELECT SUM(marks) AS total_marks
227 FROM Student_marks;
228
229 SELECT * FROM Student_marks
230 WHERE marks > 85;
231
232 SELECT * FROM Student_marks
233 WHERE marks >= 90;
```

The 'Result Grid' displays the results of the third query, showing one row of data:

| rol_no | name | subject | marks |
|--------|------|---------|-------|
| 2      | Sita | Math    | 92.75 |

The 'Output' pane shows the execution log with the following entry:

| #  | Time     | Action                             |
|----|----------|------------------------------------|
| 43 | 20:02:42 | CREATE DATABASE Koumudi_2520090161 |

## 10. Marks equal to 80

The screenshot shows the MySQL Workbench interface with the following SQL queries in the editor:

```
229 SELECT * FROM Student_marks
230 WHERE marks > 85;
231
232 SELECT * FROM Student_marks
233 WHERE marks >= 90;
234
235 SELECT * FROM Student_marks
236 WHERE marks = 80;
```

The 'Result Grid' displays the results of the third query, showing one row of data:

| rol_no | name | subject | marks |
|--------|------|---------|-------|
| 1      | Ravi | Math    | 85.50 |

The 'Output' pane shows the execution log with the following entry:

| #  | Time     | Action                             |
|----|----------|------------------------------------|
| 43 | 20:02:42 | CREATE DATABASE Koumudi_2520090161 |

## 11. Marks between 80 and 90

## 12. Names starting with A

## 13. Select Ravi, Sita and Vijay

-- 1. Create the database

```
CREATE DATABASE Koumudi_2520090161;
```

-- 2. Select the database

```
USE Koumudi_2520090161;
```

-- 3. Create the Student\_marks table

```
CREATE TABLE Student_marks(  
    roll_no INT PRIMARY KEY,  
    name VARCHAR(50),  
    subject VARCHAR(50),  
    marks DECIMAL(5,2)  
);
```

-- 4. Insert records

```
INSERT INTO Student_marks(roll_no, name, subject, marks) VALUES  
(1, 'Ravi', 'Math', 85.50),  
(2, 'Sita', 'Math', 92.75),  
(3, 'Anil', 'Math', 78.40),  
(4, 'Priya', 'Math', 88.90),  
(5, 'Vijay', 'Math', 80.25);
```

-- 5. Display all records

```
SELECT * FROM Student_marks;
```

-- 6. Count students

```
SELECT COUNT(*) AS total_students  
FROM Student_marks;
```

-- 7. Find total marks

```
SELECT SUM(marks) AS total_marks
```

```
FROM Student_marks;
```

```
-- 8. Marks greater than 85
```

```
SELECT * FROM Student_marks
```

```
WHERE marks > 85;
```

```
-- 9. Marks greater than or equal to 90
```

```
SELECT * FROM Student_marks
```

```
WHERE marks >= 90;
```

```
-- 10. Marks equal to 80
```

```
SELECT * FROM Student_marks
```

```
WHERE marks = 80;
```

```
-- 11. Marks between 80 and 90
```

```
SELECT * FROM Student_marks
```

```
WHERE marks BETWEEN 80 AND 90;
```

```
-- 12. Names starting with A
```

```
SELECT * FROM Student_marks
```

```
WHERE name LIKE 'A%';
```

```
-- 13. Select Ravi, Sita and Vijay
```

```
SELECT * FROM Student_marks
```

```
WHERE name IN ('Ravi', 'Sita', 'Vijay');
```
