Dr .M . Gayatri

RELAVANCE TO PROJECT TITLE

The project focuses on digitizing **hostel management and student accommodation services**.

It manages **students, hostels, rooms, bookings, payments, leave requests, complaints, maintenance and room allocation**.

Separate **Student and Admin dashboards** provide role-based access.

The system addresses common problems such as manual records, delayed requests and difficulty tracking hostel services.

DEPTH & QUALITY OF LITERATURE REVIEW

Existing research shows that web-based hostel systems can reduce manual work and improve transparency.

Previous systems commonly focus on student registration, room allocation, maintenance and complaint management.

Recent systems have introduced role-based access, centralized dashboards and real-time data synchronization.

Research on accommodation management also

CRITICAL ANALYSIS & SYNTHESIS OF LITERATURE

EXISTING SYSTEM	OUR PROJECT
Mainly focus on room allocation	Room Allocation + multiple hostel services
Complaint / maintenance handling	Complaint and maintenance tracking
Separate management activities	Integrated centralized system
Basic student records	Student , booking, payments records
Limited service integration	Leave, payment, booking, and maintenance together

GAP ANALYSIS THROUGH LITERATURE REVIEW

Existing systems commonly provide:

Student registration

Room allocation

Complaint management

Maintenance tracking

Identified gap:

Hostel services are not always integrated into one platform.

Some systems focus mainly on allocation and complaints.

Additional services such as **payments, leave requests and room-allocation tracking** can be integrated into a single workflow.

Proposed solution:

A centralized role-based hostel management system integrating accommodation, booking, payment, leave, complaint and maintenance services.
