

Koneru Lakshmaiah Education Foundation

(Deemed to be University estd. u/s. 3 of the UGC Act, 1956)

Off-Campus: Bachupally-Gandimaisamma Road, Bowrampet, Hyderabad, Telangana - 500 043.

Phone No: 7815926816, www.kih.edu.in

Hostel and Mess Manage System

Team Members Details

Usharani-2520090049

Mrudula-2520090073

Navya-2520090189

II Year B.Tech - I Semester - CS & IT

Under the Guidance of

Dr .M . Gayatri

NOVELTY OF DEPLOYED METHODOLOGY

The novelty of the deployed methodology lies in integrating multiple hostel services into a single role-based platform. The methodology combines requirement analysis, centralized database design, API-based backend development, and a student-admin dashboard to manage room allocation, bookings, payments, leave requests, complaints, and maintenance. This provides a unified and structured approach to hostel management instead of handling these activities

ADAPTABILITY OF METHODOLOGY

The methodology is adaptable because the system uses a modular architecture, allowing new features and services to be added without changing the entire system. The same methodology can be adapted for different hostels, colleges, student capacities, and additional services, making the system suitable for changing institutional requirements.

Methodology Evaluation

The methodology is evaluated through functional testing, database validation, user-role testing, and workflow testing. The system is tested for student and administrator login, room allocation, bookings, payments, leave requests, complaints, and maintenance services. The evaluation confirms that the methodology supports efficient data management, accurate processing, centralized access, and reliable hostel service tracking.

Dissemination and Accessibility

The Hostel Management System can be easily disseminated through web-based deployment, allowing students and administrators to access the system using a standard web browser. It provides a centralized platform for hostel services, making information and services such as bookings, payments, leave requests, complaints, and maintenance easily accessible to users.
