II Year B.Tech – I Semester – CS & IT

Under the Guidance of

Dr .M . Gayatri

ACCURACY OF RESULTS

Metric	Manual system	Proposed system	improvement
Student Record Search	~2–5 min	~5–10 sec	Faster retrieval
Room Allocation	~10-15 min	~1-2 min	Reduced processing time
Booking Record Access	~5 min	~10 sec	Faster access
Complaint Tracking	Manual follow-up	Online status	Easier tracking
Payment Record Management	Paper/Spreadsheet	Centralized database	Reduced duplication
Leave Request Processing	Manual	Online submission	Reduced paperwork
Maintenance Request Tracking	Manual	Online status tracking	Better monitoring

TECHNICAL COMPETENCE

The project demonstrates technical competence through the use of Next.js, TypeScript, MongoDB, and Prisma ORM to develop a structured hostel management system. It implements role-based authentication, REST APIs, database validation, CRUD operations, and separate Student and Admin dashboards for managing hostel services efficiently.

INNOVATIVE AND SUSTAINABLE FEATURES

The Hostel Management System provides innovative features such as role-based student and admin dashboards, centralized hostel data, online room allocation, bookings, payments, leave requests, complaints, and maintenance tracking. Its sustainable approach reduces paperwork, manual record keeping, and unnecessary office visits, saving time and resources while supporting efficient and environmentally friendly hostel administration.

UTILITY TO SOCIETY

The Hostel Management System benefits society by providing students with easy and transparent access to hostel services while reducing paperwork and manual work. It saves time, improves communication between students and administrators, and supports efficient management of rooms, bookings, payments, leave requests, complaints, and maintenance.
