PROJECT FEASIBILITY ANALYSIS

The **Hostel** Management System is feasible because it uses commonly available technologies such as Next.js, TypeScript, MongoDB, and Prisma ORM. It can be developed and operated on standard computer systems with low software and maintenance costs. The system is operationally feasible as students can manage bookings, payments, leave requests, complaints, and maintenance online, while administrators can manage hostel records through a centralized dashboard. It is also scalable, allowing additional students, rooms, hostels, and

ORIENTED WITH SOCAIL NEEDS

The Hostel Management System is socially feasible because it addresses common problems faced by students and hostel administrators, such as manual record keeping, delays in handling requests, and difficulty tracking complaints and maintenance. By providing online access to room allocation, bookings, payments, leave requests, complaints, and maintenance services, the system saves time, reduces paperwork, improves transparency, and makes hostel services more convenient and accessible for students.

NOVALITY OF OUR PROJECT

Our project introduces a smart, centralized, software-based Hostel & Mess Management System that integrates hostel and mess operations into a single platform. Unlike traditional systems that mainly provide basic record management, our system uses rule-based smart features such as suitable room allocation, complaint priority classification, roommate compatibility matching, mess feedback analysis, automated notifications, and real-time status tracking. Role-based dashboards provide customized access for students, wardens, mess staff, and
